

Firestorm

HERBICIDE

Product	Farmalinx Firestorm Herbicide
Contains	350 g/L TERBUTHYLAZINE 100 g/L GLYPHOSATE PRESENT AS THE ISOPROPYLAMINE SALT 60 g/L AMITROLE 15 g/L OXYFLUORFEN
Herbicide groups	GROUP C M Q G HERBICIDE
Main Usage	For the knockdown and residual control of annual, perennial and broadleaf weeds on fencelines, roadsides and railway lines
Key Features and technical benefits	<ul style="list-style-type: none"> • 8 to 12 months residual control or greater • 4 herbicides in one drum - no need for additional tank mixes • 4 modes of action C, M, Q and G to combat weed resistance • Very effective on hard to kill weeds like fleabane • Resistance break from glyphosate for ryegrass control • Substantial labour saving for weed management of roads and rail and improved OH&S
Main weeds controlled	Most annual, perennial and broadleaf weeds
Main use rates	20L – 25L per Ha
Critical comments	<ul style="list-style-type: none"> • Provides knockdown control and residual control of most annual, perennial and broadleaf weeds for 8 – 12 months or greater. • Apply sufficient spray to obtain even coverage. • Apply in spring or autumn when all weeds are actively growing, and while soil is moist. • Do not apply under drought conditions. • For best results add 120 mL/100 L tallow amine ethoxylate surfactant or other suitable wetting agent. • Use the lower rate on light sandy soils (sandy loams to loamy sands) and the higher rate on heavier soils (loams, silt plus clay 40-60%). Sufficient rainfall (20-30 mm) to wet the soil through the weed root zone is necessary within 2 to 3 weeks of application.
Pack Size	• 20L – 1000L
Trial work conducted	<ul style="list-style-type: none"> • Firestorm has been extensively trialled over the past 5 years in a number of states and under a range of weather conditions. • The trials have provided excellent results across the board showing superior weed control compared with other standard programs. • Firestorm has proven to be very effective against hard to kill weeds e.g. Fleabane, Ryegrass
